

Turning a Perfume Pen

Supplies Needed

- 8mm Drill Bit
- 5/8" x 5/8" x 4 3/4" Pen Blank
- Pen Mandrel
- Perfume Pen Bushings
- Perfume Pen Adapter Sleeves
- Glue (Thick CA or Epoxy)
- Sandpaper/Finish
- Drill or Drill Press
- Barrel Trimmer/Disc Sander
- Pen Press or Clamp
- Eve and Ear Protection

Cutting and Drilling the Pen Blank

- 1. Draw a 1" line lengthwise across the center of the blank to help maintain proper grain alignment when turning.
- **2.** Cut each blank 1/4" longer than the brass tube.
- **3.** Using a drill press with the blank secured in a vise or clamp, drill a hole through the center of the blank stopping an 1/8" short of the bit exiting the blank. Drill at 2,000–3,000 rpm backing the drill bit partially out of the hole every 1/2" to clear chips. When using larger bits or drilling plastics drill at 250-500 rpm.
- **4.** Trim away a small amount of wood from the end of the blank to expose the hole. The blank should be slightly longer than the brass tube. This technique prevents cracking caused when the bit exits the blank.

Gluing the Brass Tubes Into the Blanks

- 1. Lightly scuff the exterior of the brass tube with 220 grit sand paper to prepare it for gluing.
- **2.** For a fast bond, use thick cyanoacrylate adhesive (super glue) or 5 minute epoxy. For additional working time and more thorough bond, use expanding polyurethane (Gorilla or Sumo Glue). Apply a thin layer of glue to the tube and inside the wood blank. Insert the tube into the blank rotating it as you go to spread the glue evenly. Position the brass tube in the blank so that the wood extends beyond the tube on both ends to allow for trimming.

Trimming/Truing the Blanks

1. Square the ends of the wood blank with the tube using either a barrel trimmer or disc sander. This step is critical for the pen components to fit together properly. *Do Not* trim the brass tube as this may result in an improper fit when the pen is assembled.

Mandrel Setup and Turning

1. Assemble the bushings as shown below. Insert the adapter sleeves (7mm brass tubes) into the brass tubes and place the blanks on the pen mandrel. Be sure that the ends of the blanks with the reference mark meet together at the center of the mandrel.

- **2.** Advance a 60° revolving cone center into the dimpled end of the mandrel and tighten using light pressure. *Do Not* over tighten the tailstock or mandrel nut as this may cause the mandrel to flex resulting in off-center barrels.
- **3.** Turn both blanks to the desired shape leaving the blanks slightly larger than the bushings.
- **4.** Sand the blanks using progressively finer grits of sand paper, then apply the finish.

Assemble the Parts

Layout the parts as shown paying careful attention to keep the pen tubes in the same orientation as when on the mandrel. Use a vise or clamp with wood or plastic jaws to prevent damaging parts during assembly.

Hint: While removing the tubes from the mandrel, mark the inside of each brass tube where they join to maintain grain alignment during assembly.

- 1. Press one of the caps into one end of the long brass tube.
- **2.** Roll the "O"-ring onto the tip holder, over the threaded section to the base of the threads.
- **3.** Insert the perfume storage cylinder into the large diameter (stepped end) of the tip holder. This will require pinching the end of the cylinder to fit into the tip holder.
- **4.** Press the tip holder into the other end of the long brass tube and insert the perfume tip.
- **5.** Press the remaining cap into the short brass tube.
- **6.** Press the threaded coupler into the other end of the short brass tube.

Use: Dip the perfume tip section into the perfume and allow the perfume to be drawn up into the perfume storage cylinder. You may also use an eye dropper to fill the perfume storage cylinder by removing the perfume tip.
